

# Payment Page

Web-based smarpay payment page for fast and secure payment

- Supports all common payment methods, incl. payments on cell phone bills
- Optimized payment process for automated payment (automated machine integration)
- Alternative and / or parallel use to the smarpay payment App
- Fast and secure payment without machine integration (e.g. farm store)
- Standalone use or integration in native App

Direct product selection

## Application areas

Wherever fast and secure payment "without complications" is required, the smarpay payment page is suitable. It can be used directly web-based without integration. In addition, it is specially designed for integration into vending machines and/or existing native iOS and Android apps with minimal development effort.

It is easy to use: scan QR code, select product and pay.

- No App download
- No registration with personal data necessary
- Direct product selection
- Choice of payment from all common payment methods

Web-based payment page

## Technical Data

Operating systems:	Web-based (Browser), smarpay Hosting (Cloud)
Direct payment:	Mobile phone bill, credit and debit cards, account-account connection (PSD2), PayPal and Twint (country-specific)
Direct product selection:	Single product, several few products simultaneously and shopping cart function (many products)
Without registration:	The payment page can be used without registration and without entering personal data
Online available:	An App download for using the smarpay payment page is not necessary
App integration:	The payment page can be integrated into any native iOS and Android App via a so-called "webview"
Machine integration:	The machine integration is carried out by installing our smarpay Payment Controller (SPC) or by using a possibly already existing telemetry solution
Telemetry:	Through the integration of our SPC, the necessary telemetry functions for the operation of vending machines are also available

In-App integrated
